duolingo

New Feature - Duolingo Language Battle

Battle Your Way to Fluency

Targeted KPI(s):
Daily Active Users (DAU), Retention, and Engagement Time

Presented by Daniel Yang

User Pain Points & New Feature Wireframe

Pain Points & Strategy

Engagement Fatigue

Strategy: Introduce 4 combat modes. Use performance analytics, streak tracking, and rewards to keep learners motivated.

Unclear Progression Challenges

Strategy: Provide dynamic matchups. Ensure rank progression clarity with analytics and rewards.

Lack of Immediate Feedback in Real-Time

Strategy: Deliver instant feedback during matchups to reinforce learning.

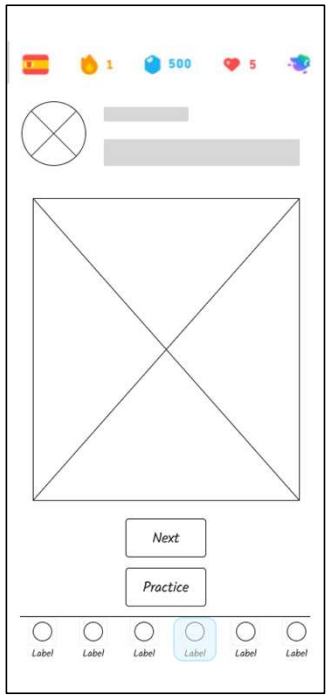
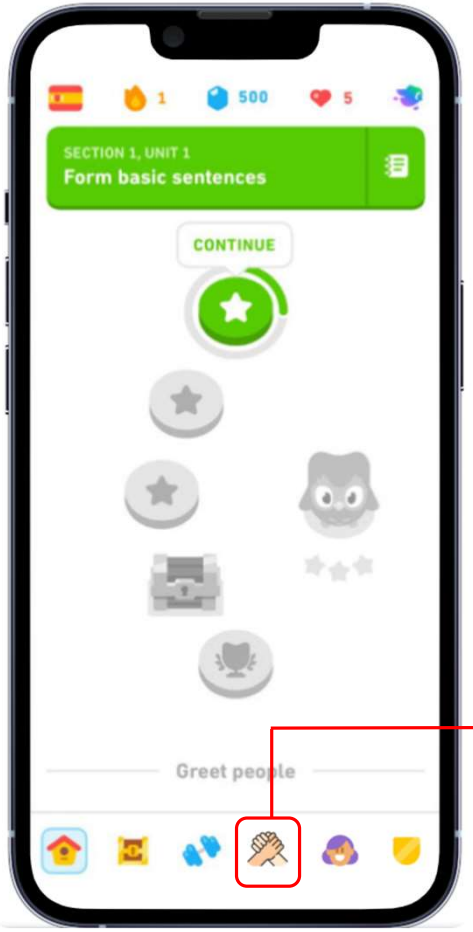
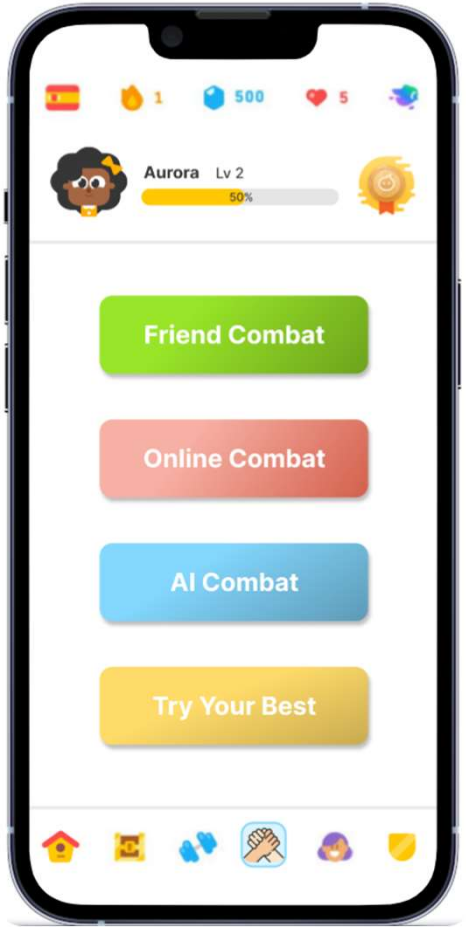
Post-Battle Summary



Navigation & Battle Section



Battle Mode Icon



Battle Mode Buttons:

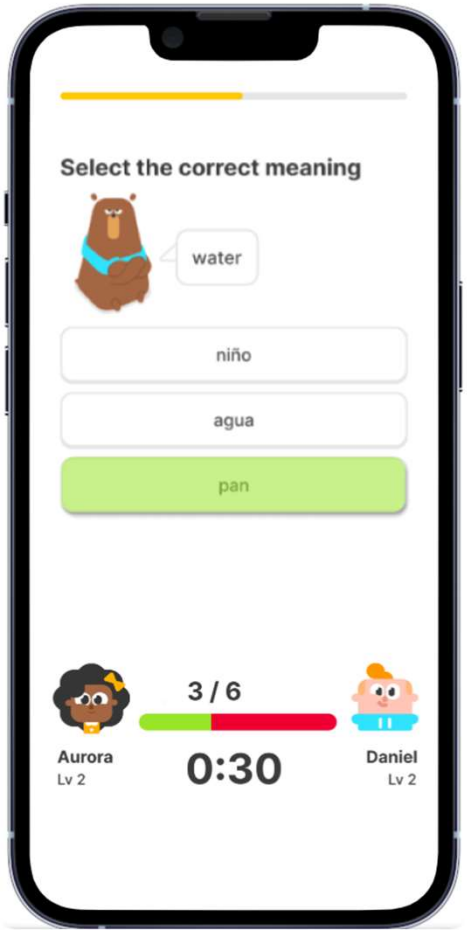
Friend Combat (Green): Challenge friends for a personalized and social battle experience.

Online Combat (Red): Compete in real-time with learners globally for high-energy interaction.

AI Combat (Blue): Test skills against an adaptive AI opponent to simulate competitive practice.

Try Your Best (Yellow): Engage in the "Limit Testing" mode, aiming to answer as many questions as possible without making a mistake.

Engagement & Progression



Matchmaking Screen (Left)
Displays player profiles and sets the stage for the battle with a dynamic "VS" graphic. Highlights the user's current streak, adding motivation for consistent performance.

Game Objective Prompt (Mid)
Clear, concise instructions ensure players understand the goal.

Battle Interface (Right)
Familiar Duolingo Q&A format enhances usability and comfort. Real-time scoring and progress tracking add competitiveness and keep players engaged.

Progression & Testing Plan

Validation of Hypotheses

Objective: Assess feasibility and user interest in the battle mode before full development.

Competitive Analysis: Review similar products (e.g., QuizUp, Kahoot!) to understand the impact of real-time competition on engagement.

Prototype Testing: Test a clickable prototype with users to gather feedback on usability and motivation.

User Surveys: Collect data from Duolingo users on their interest in competitive features and its impact on learning.

Early Beta Testing: Release a minimal version to a small group and track engagement, usability, and satisfaction.

A/B Testing

Objective: Assess the battle mode's impact on engagement, learning, and retention.

Test Design: Compare a control group (no battle mode) with a test group (battle mode enabled).

Tracking Metrics: Track battles initiated, time spent, accuracy rates, streak lengths, user retention (7, 14, 30 days), and friend challenges.

Performance Analysis: Compare test group performance with the control group to refine feature design and rewards.
